Matteus Barbosa

Senior Web Developer | React, PHP | 2x AWS Certified
Brazil

Summary

I've started my career in I.T. when I was 16, delivering visit cards and flyers – informing – about my services to local businesses.

Interested in business and technology since I was a teenager, I graduated as a Computer Technician from EPSA and graduated in Information Systems from PUC Minas and I have been working as a web application developer since 2012, solving business problems related to the distribution market, bank reconciliation and eventually e-learning. I'm interested in quality documentation, success stories and networking. Among the next objectives, I seek international development experiences. Graduated in computer technician, I started as a freelancer and in the first year I developed two systems in PHP: cash flow and registration of license plates. When I started my degree in Information Systems, I did an internship in web development at CITIS: I took care of the maintenance of the clients' institutional portals and the company's internal systems. Then, the opportunity arose to work as a programmer at a health insurance company, Vitallis, which was enough to acquire solid knowledge in Linux, Git, Bootstrap, Laravel, SCRUM and teamwork. I took part in college and pre-university SOMA projects, with which I worked in two and a half years: in the development of an LMS based on Moodle; integration with payment gateways; renovation and maintenance of the main portal; maintenance of the academic information system; construction of a virtual store for Editora SOMA; obtaining data via automated crawlers from SISU and DATAESCOLA; e-mail marketing; creation of a system to integrate sectors of the institution. I was part of IGTI for half a year where I contributed to the creation of the portal for quick courses and website development for the 2018 campaign. I had a brief stint at Lanchar Tecnologia, where I delivered a canteen management system using SPA ReactJS and Lumen API. I worked as a Software Engineer at Symplicity Corporation, working with important clients such as the Judiciary system and the United States Health System. Today I work as a

Senior Software Engineer for Flatiron Software, serving customers in the gas segment in the United Kingdom, and a large corporation in the media segment in the United States.

Experience

Flatiron Software Co

Senior Web Developer

June 2022 - Present (2 years 8 months)

I have built integrations for a UK based client CRM with GoCardless, Refinitiv, CreditSafe. I build features for a huge media and newspapers client US based, in a Google Cloud Platform pipeline.

Symplicity Corporation

Software Engineer

March 2020 - June 2022 (2 years 4 months)

Belo Horizonte e Região, Brasil

Working on systems development and maintenance for the USA government. Here we have our own proprietary framework, team work, flexible management and employee wellness valorization.

Lanchar Tecnologia

Desenvolvedor de software

September 2019 - March 2020 (7 months)

Contagem e Região, Brasil

Design and maintenance of Web Systems. Support to the company's systems. Development of Laravel/Lumen API and Front-end in Reactjs. Support and maintenance of databases and servers.

Autônomo
